Planning guidelines
Gas connection hose to be provided by customer (thread diameter 1/2" cylindrical)
Please provide sufficient ventilation below the gas cooktop. Either via the carcass front (opening cross section > 50 cm2) or via the base area opening cross section > 150 cm2
Provide a return port (opening cross section > 1000 cm2) per air cleaning unit)) for the air return of the circulating air in the base area
Adhere to the locally valid regulations and connection conditions for gas cooktops
Adhere to the special mounting and processing guidelines for the gas cooktop PKG11 (see operating and installation instructions)
When operating the gas cooktop with a cooktop extractor, the gas flame can be influenced (depending on the power level on the cooktop extractor)

product- and planning instructions
- Ensure sufficient air supply below the gas cooktop. Either over the front of the body (opening cross-section > 50 cm²) or over the plinth area (opening cross-section > 150 cm²)
- Provide a return flow aperture (opening cross-section > 1000 cm² per air cleaning unit) for recirculation in the plinth area
- Please note the local regulations and connection requirements applicable to gas cooktops
- Please take into account the special guidelines regarding the assembly and use of gas cooktop CKG (see operating and installation instructions)
- When operating a gas cooktop with a cooktop extractor, the gas flame can be affected (depending on the height of the power level on the cooktop extractor)
- The performance characteristics of the gas cooktop (e.g. heating times, efficiency, etc.) are affected by the cooktop extractor. The cooktop extractor also affects the heat input and distribution
- If the gas cooktop is used in a model with two cooktop extractors, it is to be installed at the side
- Minimum requirement for operating gas cooktop CKG: System software 03.00 (or higher)
